

William J. Scott

Software Engineer • (360) 303-1563 • wsc0tt@outlook.com

[Portfolio](#) • [GitHub](#) • [LinkedIn](#)

Professional Summary

Recent Computer Science graduate and full-stack software engineer experienced building web applications, backend services, and data-driven systems. Experienced designing database-backed features, integrating APIs, and delivering maintainable software in collaborative Agile projects.

Education

California State University, Sacramento, CA — B.S. Computer Science, December 2025

GPA: 3.8 • Dean's Honor List

Relevant Coursework

Data Structures & Algorithms, Software Engineering, Operating Systems, Networking, Database Systems, Object-Oriented Programming, Deep Learning

Technical Skills

Languages & Scripting: TypeScript, JavaScript, C#, SQL, Python, Java, C++, C, PowerShell, Bash

Technologies: .NET, PostgreSQL, React, Next.js, RESTful API, Docker, Git, Azure, Linux, WSL, TensorFlow

AI & Developer Tools: Codex, ChatGPT, Jira, Linear

Projects

Union Job Dispatch & Management Platform | *React, Supabase, Vitest, Docker, Jira*

[Github](#)

- Co-led a 9-engineer team delivering a production application serving 20,000+ union members.
- Designed PostgreSQL schemas, business logic, and role-based access controls supporting workforce dispatch operations.
- Gathered stakeholder requirements, validated business needs, and translated business workflows into software solutions.

StockTower - AI-Powered Portfolio Research | *Next.js, TypeScript, Neon Postgres, Auth.js*

[Live Demo](#)

- Built an AI-powered investment research platform using Next.js, TypeScript, Auth.js, and Neon Postgres.
- Developed a CSV ingestion pipeline that normalizes brokerage exports and stores portfolio holdings for analysis and reporting.
- Implemented live market data, gain/loss analytics, allocation metrics, and interactive dashboards using Finnhub APIs.

Float - Asset Equity Tracking Platform | *.NET 8, C#, React, TypeScript, PostgreSQL, Azure*

[Github](#)

- Designed relational database schemas supporting financial, loan, asset, and equity management workflows.
- Developed RESTful APIs and business logic for managing complex financial data relationships.

Mars Rover Terrain Risk Classifier | *Python, TensorFlow, Transfer Learning*

[GitHub](#) | [Research Paper](#)

- Developed a deep-learning terrain risk classifier for autonomous Mars rover navigation using TensorFlow and transfer learning techniques.
- Achieved 82.6% classification accuracy while reducing model size by 87.6%, and documented findings in a technical research paper.

Professional Experience

Syblon Reid — *Laborer Foreman* | Folsom, CA July 2013 - November 2022

- Led 30+ infrastructure projects end-to-end for high-profile utility and government clients including PG&E, SMUD, DWR, and Southern California Edison, with zero safety incidents.
- Solved critical logistics bottlenecks independently under 48-hour deadlines on active utility infrastructure.
- Adapted workflows daily to shifting site conditions, exercising rapid decision-making under incomplete information.
